

Shiga toxin-producing *E. coli*

STEC is a reportable disease – report to Maine CDC at 1-800-821-5821

Definition	Role of the School Nurse
Signs and Symptoms	Exclusions
Transmission	Reporting
Diagnosis/Treatment	Resources

Definition

Some kinds of *E. coli* cause disease by making a toxin called Shiga toxin. The most common STEC is O157:H7 commonly referred to as O157.

Signs and symptoms

Symptoms of STEC include: severe stomach cramps, diarrhea (often bloody) and vomiting. If there is a fever, it usually is not very high. Some cases may develop hemolytic uremic syndrome (HUS). Most people get better within 5-7 days.

Transmission

STEC is primarily transmitted to a person through swallowing the bacteria from a contaminated item. Known exposures that result in illness include consumption of contaminated food, consumption of unpasteurized (raw) milk, consumption of water that has not been disinfected, contact with cattle or contact with the feces of infected people or animals.

Diagnosis

STEC is diagnosed by clinical symptoms and laboratory tests. Laboratory tests include testing of stool, blood, or other sterile body fluid for the presence of shiga toxin and the presence of *E. coli*.

Treatment Recommendations

- If symptoms are noted, the child should be referred to their primary care provider for treatment
- Non-specific supportive therapy, including hydration, is important
- Antibiotics should not be used to treat STEC
- Antidiarrheal medications may increase the risk of complications, such as HUS

Role of the School Nurse

Prevention

- Provide education to students and staff regarding good hand washing with soap and water
- Promote proper hand washing after handling animals
- Avoid swallowing water when swimming or playing in lakes, ponds, streams, swimming pools and backyard “kiddie” pools
- Exclude students symptomatic from school and school trips, especially involving swimming
- Provide education on good food safety practices
- Promote washing of fruits and vegetables
- Avoid unpasteurized dairy and juice products

Exclusions

- Students should be excluded from school while symptomatic with diarrhea per consultation with the Maine Center for Disease Control and Prevention at 1-800-821-5821
